

ANNEX 1

PUBLIC

Indicative Prices of Goods and Services for Darfur and Chad and Potential Costing of Reparatory Measures

Brief Introduction

This annex is separated in to two parts. Part I outlines the demographic composition of the population of Sudan. Utilising these figures, it suggests an approach to determine the overall costs of any reparatory measure that the Chamber determines appropriate. Part II provides an indicative price list of goods and services in Darfur and Chad, which may be necessarily required for the implementation of particular reparatory measures. The goods and services included in these lists were identified by the CLRV and Field Assistants in those locations. Any relevant considerations such as quantity, duration or delivery formats relating to each good and/or service are noted for the Chamber's assistance.

One major issue is currency and inflation. In September–October 2026 a US dollar bought about SDG 8,800 on the market [REDACTED], whereas the official rate was SDG 6,500 through the Bankak app in [REDACTED].¹ However, if withdrawing, persons can expect to receive about SDG 4,600–5,000 in cash in Darfur due to withdrawal fees.² The UN exchange rate converts USD 1 to SDG 7,000 and intermediaries describe this as conservative.

PART I

Demographic composition: The following ratios are assumptions based on Sudan-wide data, chosen to be conservative for a young, conflict-affected population.³ These are the most up to date figures retrieved by the CLRV:

Group	Ratio
All targeted victims	100%
Children under 5	17%
Primary school age (6–13)	24%
Secondary school age (14–16/17)	9%
Young people (15–24)	19%
Women of reproductive age (15–49)	22%
Adults (18 and over)	≈ 50%
Older persons (60+)	4.5%
Persons with disabilities	15%

¹ CLRV Field Assistant, [REDACTED], Darfur.

² See specific withdrawal fees for Darfur and Chad included in Part II.

³ United Nations [Department of Economic and Social Affairs](#), Population Division, World Population Prospects 2024; [World Bank](#), Sudan Basic Education Emergency Support Project, Project Appraisal Document, Report No. PAD3611, 1 May 2020, p. 6, para. 1.

CLRV suggested approach to costing reparatory measures:

- I. **Identify a need:** For example, Annex 6 of CLRV submissions on reparations records school closures, volunteers teaching without formal pay, or water systems that are not working.⁴
- II. **Define the population to be served:** Whether the unit is a person, pupil, household, treatment episode, water user or entire community. Assume and confirm who might be eligible under the eventual reparations order as well reference to the demographic composition to be served.
- III. **Identify the quantity:** Account for existing functional services; estimate the service gap; calculate the number of facilities, staff, sessions or supplies required. Round physical facilities and people to realistic whole numbers, instead of statistical data.
- IV. **Separate different cost layers:** Consider all necessary components to fully service the need. For example, a patient’s referral transport may be part of the care being paid for, whereas shipping construction materials to a project site may be an additional logistics expense. Each cost must appear once.
- V. **Price of one complete unit:** Break a classroom, training course or agricultural package into its actual components, from materials, labor, teaching, equipment, professional services and other relevant items, and then match each ingredient to an appropriate local quote provided by CLRV intermediaries or cost record of projects implemented in Darfur.⁵ Prices of relevant goods and services can be found below.
- VI. **Totals:** Consider the unit costs of all components to assume total for each reparatory measure.

PART II

Darfur

Prices for Darfur were collected in [REDACTED] in October 2026 and the average price was generally adopted.

UN exchange rates were applied: 1 USD = 7,000 SDG; 1 USD = 0.894 EUR; therefore 1 EUR = 7,829.98 SDG.
